ClassLens ASD — Sarah's Guide

What We Need From You (The Teacher Who Makes This Real)

You have two brilliant ideas at the heart of this project. This guide walks you through exactly what you'll do, week by week — no tech knowledge required. **Jeff builds it. You make sure it's right.** Together, we tell a story no other team can tell.

COMPETITION DEADLINE: MAY 18, 2026

6 WEEKS · APRIL 5 – MAY 17

What Is ClassLens?

You know how you spend hours every week counting tally marks, calculating percentages, and tracking each student's progress toward their IEP goals by hand? And then on top of that, you have to create personalized materials for every kid — dinosaur worksheets for one, train activities for another, space-themed social stories for a third?

ClassLens is an AI tool that does all of that for you. It started from YOUR two ideas:

💡 Your First Idea

Input a child's interest (dinosaurs, trains, space) plus a learning target — and get personalized lessons, activities, and worksheets themed around that interest. No more digging through TPT and Pinterest for 8 different kids.

💡 Your Second Idea

Input each child's IEP goal — and get lesson plans, activities that build toward that goal, AND data tracking sheets specific to that goal. Plus polished reports that administrators love.

01

Reads Photos of Student Work

Tracks IEP progress automatically from photos you take at the end of the day.

02

Generates Personalized Lessons

Activities themed to each student's specific interests — Jurassic World raptors, The Polar Express, whatever makes them light up.

03

Creates Clipboard-Ready Tracking Sheets

Data tracking sheets you can actually carry and fill out while you're teaching.

04

Produces Professional Reports

Polished progress reports that make your admin happy and your IEP meetings smoother.

You are always the final decision-maker. The AI drafts. You approve. It never assigns a grade, never sends a message home, never modifies an IEP. Ever.

Why Your Role Matters More Than the Code

The Competition Reality

We're entering this in a competition. Here's the key: **70% of the judging score is about the human story, not the technology.**

A hundred teams will build chatbots. Only ONE team has a practicing teacher who knows what ASD students actually need.

Your classroom reality, your voice, and your professional judgment are what make this entry impossible to replicate.

What You Bring That No One Else Can

- Real knowledge of what ASD students actually need day to day
- Lived experience with IEP documentation and what admins want to see
- The authentic teacher voice that judges will trust and remember
- Professional judgment that makes the AI actually useful in real classrooms

> Jeff builds the technology. You make sure it actually works the way real classrooms work.

Your Time Commitment at a Glance

About **3–5 hours per week for 6 weeks** (April 5 through May 17). Some weeks are heavier than others. The format is totally flexible — write things in a doc, email them, text them, or just talk while Jeff takes notes. Whatever works best for you.

1

Week 1

Apr 5–11

Student Profiles

2

Week 2

Apr 12–18

Work Samples + First Review

3

Week 3

Apr 19–25

What "Good" Looks Like

4

Week 4

Apr 26–May 2

Judge the AI (Round 1)

5

Week 5

May 3–9

Final Reviews + Video

6

Week 6

May 10–17

Final Sign-Off

3–5

Hours Per Week

Flexible format — doc, email, text, or voice memo

6

Weeks Total

April 5 through May 17

May 17

Submission Day

One day early for buffer — deadline is May 18

Week 1: April 5–11 — Student Profiles

THE FOUNDATION

This is the most important week. Everything else builds on what you create here. Create **3–5 fictional student profiles** based on composites of real students you've worked with — but change every identifying detail.

What Each Profile Should Include

- Name (fictional), age, and grade
- ASD support level (1, 2, or 3)
- Communication level (non-verbal? 1–2 word phrases? full sentences?)
- Specific interests — be as specific as possible! "Jurassic World raptors" not just "dinosaurs." "The Polar Express" not just "trains."
- Sensory profile: what do they seek? What do they avoid? What calms them down?
- Preferred reinforcers: what motivates this kid?
- 3–5 IEP goals in proper format, with baselines and targets
- A brief personality sketch: what makes this kid, this kid?

Suggested Student Range

Student 1

Most verbal, highest functioning — easiest to demo

Student 2

Moderate support needs — the "middle"

Student 3

Most support needs — shows the tool works across the spectrum

Students 4–5

Optional — adds richness, but 3 is enough!

Also This Week

30-Minute Chat with Jeff

Walk Jeff through your IEP data collection process. How do you do it now? What's painful?

Dashboard Sketch

Sketch on paper what a "useful end-of-day dashboard" would look like to you. No tech skills needed — stick figures welcome!

Share Your Tracking Sheets

Show Jeff what your current data tracking sheets look like — the ones you carry on a clipboard. What works? What's missing?

Format tip: Just write it however is easiest. Doc, email, text, voice memo. Jeff will format everything. You just bring the knowledge.

Week 2 & 3: Building the Foundation

WEEK 2 · APR 12–18

Work Samples + First Review

Create sample work artifacts — the kinds of things you'd photograph at the end of a school day. For your top 2–3 students:

- 2–3 handwritten worksheets (math, matching, fill-in-blank)
- 1–2 behavior tally sheets with checkmarks or tally marks
- 1 completed visual schedule (items in "to do" vs "done")
- 1 task-analysis checklist (multi-step skill like hand-washing, packing up)

🎉 **Messy is actually better!** Handwrite them on real paper and photograph with your phone. It proves the AI handles real classroom conditions.

Jeff will send you the AI's first attempts at reading student handwriting. Does it get it right? Flag anything it misses.

WEEK 3 · APR 19–25

What "Good" Looks Like

Write reference samples by hand — what you'd *want* the AI to produce. For 2–3 students, write:

- A lesson plan or activity idea for a specific IEP goal
- A data tracking sheet you'd actually carry on a clipboard
- A progress note you'd actually submit to the IEP team
- A social story you'd actually use (Carol Gray's framework)
- A parent communication you'd actually send home
- A "teacher alert" that would change tomorrow's instruction
- A progress report you'd show your admin or bring to an IEP meeting

✏️ **Why this matters:** These become Jeff's "answer key." If the AI generates something different from what you wrote, we know exactly what to fix.

Week 4: April 26–May 2 — Judge the AI

ROUND 1 REVIEW

The AI should be producing real outputs now. **Your job is to be the judge.** You know what good looks like — and that's exactly what we need from you this week.

📋 Lesson Plans

"Would I actually use these activities? Do they build toward the goal?"

📊 Data Tracking Sheets

"Could I carry this on a clipboard? Is it easy to tally in real-time?"

📝 Progress Notes

"Would I submit this to the IEP team?"

🔔 Trend Alerts

"Is this the kind of pattern I'd want flagged?"

🗣️ Vocabulary & Tone

"Does it sound professional? Does it sound like a teacher wrote it?"

🎯 Personalization Check

Flag anything generic ("this could be for any kid") vs. actually personalized to THIS student.

🎬 **Also this week:** Start thinking about the video. What's the most compelling 30 seconds you can say about the IEP data grind? Just jot down a few bullet points — no scripts needed.

Week 5: May 3–9 — Final Reviews + Video Recording

Final Content Reviews

Social Stories

Do they follow Carol Gray's sentence types and ratios?

Visual Schedule Descriptions

Could a para create the visual from this in 5 minutes?

Parent Communications

Would you actually send this home?

🎬 Your 4 Video Segments (~30 seconds each)

01

The Problem

Describe what IEP data collection actually looks like. Sticky notes, tally marks, staying late.

02

The Student

Introduce one fictional student naturally, like you're telling a colleague about your class.

03

The Validation

React genuinely to a ClassLens output on camera. Consider reacting to a lesson plan or admin report — those are YOUR ideas!

04

The Impact

"This would give me back my Tuesdays. That time goes back to being WITH my students."

> Don't script it word for word. Bullet points are fine. Talk like you're explaining it to a friend. Phone camera is fine. **Authenticity beats production quality every time.**

✅ Quick Checklists — Tape These to Your Fridge!

Use these every time you review an AI output. They're your quality filter — and they're based entirely on your professional expertise.

For Any AI Output

- Does this reflect what I know about THIS specific student?
- Is the vocabulary at the right level for this student?
- Would I use, submit, or send this without major edits?
- Does the format feel familiar and predictable?

For Lesson Plans

- Does this activity actually build toward the IEP goal?
- Is it appropriate for this student's support level?
- Are the student's interests incorporated naturally?
- Could I realistically do this in my classroom?
- Is it scaffolded appropriately?

For Data Tracking Sheets

- Can I fill this out while teaching (not just after)?
- Are the right things being tracked for this goal?
- Is the layout intuitive enough for a para?
- Does it match how IEP goals are measured?

For Social Stories

- First person? ("I" not the student's name)
- More descriptive/affirmative than directive sentences?
- Student's interests woven in naturally?
- All vocabulary concrete? (No metaphors, no idioms)

For Progress Notes

- Correct IEP goal referenced?
- Trial data accurate?
- Trend direction noted?
- Professional enough for the IEP file?

For Admin Reports

- Would this impress your principal?
- Is the data presented clearly with trends visible?
- Appropriate language for non-classroom audience?
- Would you bring this to an IEP meeting?

For Parent Communications

- References something specific from today?
- Celebrates something concrete?
- Suggests ONE thing to do at home?
- Warm but professional tone?
- Would you actually send this home?

The Bottom Line

> Both of your ideas — the interest-based personalization AND the IEP goal-driven lesson planning — are the heart of this entire project.

We're wrapping them in technology that also handles the data grind and produces the polished reports that administrators want. But the ideas? Those are yours. The expertise? That's yours. The story that wins this competition? That's yours too.

What You Bring

What real students need. What real classrooms look like. What real IEP documentation requires. What impresses the people who evaluate your work.

What Jeff Brings

The code, the AI, the technical infrastructure — all built around the expertise and ideas you provide.

What You Build Together

A story that no other team can tell. A tool that actually works in real classrooms. A competition entry that judges will remember.

70%

Human Story

That's how much of the judging score is about YOUR story, not the technology

0

Lines of Code

You don't need to touch any code. Not a single line. Ever.

May 17

We Submit

One day early for buffer. Competition deadline is May 18, 2026.

🌟 **You don't need to touch any code.** You just need to bring your expertise — and that expertise is the most valuable thing in this entire project. Thank you for making this real, Sarah.
